

PRESS RELEASE 20th October 2005

SONTRONICS POPSHIELD (ST-POP) LAUNCHED

This month sees the launch of a new Sontronics product... and it's not a microphone. The ST-POP is a specially designed popfilter, an essential tool for anyone recording speech or vocals.

The ST-POP features a special dual-layer nylon mesh that significantly reduces the 'popping' noises associated with the consonants 'p' and 'b'. Similarly, harshness caused by sibilant sounds, such as the letter 's', is also dramatically reduced, helping users capture the best possible recording without the need for extra editing at the mixing stage.

The fully adjustable flexible arm allows for simple and accurate positioning when the ST-POP is attached to any microphone stand. Maintenance is easy too – the ST-POP is designed so that users can merely unscrew the clamp at the bottom of the ring and remove the cartridge, which can be cleaned in warm, soapy water.

The ST-POP is supplied with a replacement nylon cartridge.

This new product enhances the already popular and ever-growing Sontronics range of microphones, and is yet another step forward for the company, as Founder, Trevor Coley, explains: "Our aim is to provide musicians with exactly the kind of tools they need to produce great recordings every time, whether it's in a professional studio or a home recording environment. Our new ST-POP popshield perfectly complements our existing range of microphones, and should be the obvious choice for anyone recording vocals."
